

PRODUCT TECHNICAL SHEET

Soil Mixes

product name

Vegie Mix

description

Vegie Mix is a rich and friable blend designed specifically for vegetables and gross feeders such as roses and citrus. One of the components is our premium Gold Blend Organic Soil which is certified to Australian Standard AS 4419, Soils for Landscaping and Garden Use. Added to this is our product Mix n Feed - a balanced combination of premium compost and aged manures. Blending these two products has resulted in Vegie Mix - a well structured soil mix which is high in organic nutrients.

source

50% Gold Blend & 50% Go Mix n Feed.

:: Extracted VENM soil and sand from Soilco Pty Ltd Wogamia.

:: GO Compost manufactured from recycled organics and certified to AS 4454 - Soil Conditioners.

:: Turkey and cow manure sourced from local farms before being composted and blended.

benefits

:: Friable blend with excellent moisture infiltration and drainage.

:: Organic matter in compost and manure provides slow releasing organic nutrients & water holding capacity. Also provides humus which improves soil structure.

:: Compost increases soil organic carbon - essential for soil fertility and crop productivity. :: Manures provide vegetables with essential nutrients, particularly nitrogen, phosphorus & potassium.

application

Vegie Mix can be used as a top up for existing garden beds or used to start a new garden. When calculating quantity required consider the types of vegetable being grown. Root crops such as carrots and beetroots will require a thicker depth.

:: All weeds, rubble or turf should be removed. Loosen up the ground underneath to give extra depth and improve drainage. Apply at the required depth - avoiding compaction. If possible lightly dig in to existing site soil.

:: Vegie Mix is high in nutrients, so it is important to water well and maintain moisture levels, particularly in the early stages of planting.

:: After planting it is desirable to apply mulch. Mulch will help protect young seedlings from weather extremes as well as assisting with the retention of moisture and weed suppression.
